UI-E-EJO is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           T 3']; double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized, and was constructed by Bento Soares and M.Fatima Bonaldo."

The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAACA; lens, CGATTAGCGA; eye anterior segment, AATGCGCAT; optic nerve, CCATTAACTG; retina, CCGCG; Retina Poveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

UI-B-500 is a subbracted CDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) lB tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA; lens, CGATTAGCGA; eye anterior segment, AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-976-740-7 (1-217) x AAV32838 (1-1208)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This cDNA clone codes for novel human low density lipoprotein (LDL) binding protein LBP-2 (see AAW49041). It was isolated by screening human liver, aorta and foetal brain cDNA libraries with rabbit LBP-2 cDNA. cDNA clones (see AAV2834-39) and encoded rabbit and human LBPs (see AAW49037-42) are claimed. An abnormality in LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for determining if an animal is at risk for atherosclerosis (e.g. for prenatal screening); methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent formation of atherosclerotic plaque; and methods for treating a cell having an abnormality in LBP structure or metabolism. Pharmaceutical and vaccine compositions are also provided, as well as recombinant vectors and host cells used to produce recombinant LBP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid encoding low density lipoprotein binding proteins and related vectors - transformed cells, proteins, and modulators of binding, useful for treatment and diagnosis of atherosclerosis and for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 9; Fig 16; 47pp; English

The present sequence is that of a partial cDNA encoding novel human low density lipoprotein binding protein 2 (LBP-2, see ALBB2803). Clones were isolated from human foetal brain, liver and aorta cDNA libraries using rabbit LBP-2 cDNA as probe. A full-length cDNA clone is given in ALH26499, and a genomic DNA sequence is given in ALH26495. LBP-2 nucleic acids are among claimed polymucleotides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in
                                                                                                                                                                                                                                   New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                 WPI; 2001-565505/63.

The present sequence is that of the coding region of the human gene (see also AAH26494) encoding novel human low density lipoprotein binding CC protein 2 (IBB-2, see AAB2806). The gene was isolated from a genomic DNA CC library using LBP-2 cDNA as probe. The LBP-2 protein predicted from the CC present sequence differs from that predicted from a cDNA clone (see CC AAB2803) in that it contains an additional 321 amino acids at its N-CC terminus (the cDNA is a 5' truncation). LBP-2 nucleic acids are among CC claimed polymucleotides of the invention that encode novel polypeptides (capable of binding to native and methylated LDL. Also claimed are CC isolated LBP polypeptides, and biologically active fragments and CC analogues of them, as well as expression vectors, cells and methods of cproducing the LBPs. Methods of determining if for use in treating CC atherosclerosis, methods for evaluating an agent for use in treating CC atherosclerosis, and methods for treating a cell having an abnormality in CC structure or metabolism of LBP are claimed, Pharmaceutical compositions, CC are also claimed

sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the
                                                                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antibleer; vulnerary; anticonvulsant; antibbacterial; antifungal; antiparasitic; cardiant; immune disorder; addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; cardiovascular disorder; wound healing; neurological disease; ds.
                                                                                                                                                                                                                                                              New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antivier; valuerary; anticorvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune habenlytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; neurological diseases such as myocardial ischaemias; wound healing; neurological diseases such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            No.:

                                                                                                                                                                                                                                                                                           The present sequence is that of cDNA encoding a portion (see AAB82799) of novel rabbit low density lipoprotein binding protein 2 (LBP-2). The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. A full-length sequence for LBP-2 is given in AAH26500. The invention provides claimed polymucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for revaluating an agent for use in treating atherosclerosis, and methods for revaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine
                                                                                                                                                                                                                                                   Sequence 1362
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               02-MAR-2000;

The cDNA CC was isolated following screening of a rabbit cDNA library for clones CC encoding LBBs that bound to both native low density lipoprotein (LDL) and CC AAH26491. The invention provides claimed polymucleotides encoding movel CC polypeptides which are capable of binding to native and methylated LDL. CC the isolated polypeptides, termed LBPs, and biologically active fragments CC and analogues of them, as well as expression vectors, cells and methods CC of producing the LBPs. Also claimed are methods of determining if an CC animal is at risk for atherosclerosis, methods for evaluating an agent CC for use in treating atherosclerosis, methods for treating are cell CC compositions comprising an LBP polypeptide or nucleic acid, and vaccine CC compositions, are also claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Percent Similarity:

                                                                                                                                                                                                       CC The present sequence is that of cDNA encoding a portion (see AAB82798) of convel rabbit low density lipoprotein binding protein 2 (LBP-2). The cDNA CC was isolated following screening of a rabbit cDNA library for clones cencoding LBPs that bound to both native low density lipoprotein (LDL) and centryl LDL. A full-length sequence for LBP-2 is given in AAH85500. The convention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated compositions of them, as well as expression vectors, cells and methods of canalogues of them, as well as expression vectors, cells and methods of is at risk for atherosclerosis, methods for evaluating an agent for use compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions comprising an LBP polypeptide or nucleic acid, and vaccine

The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, and methods for treating an adent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine

related vectors - transformed cells, proteins, and modulators of binding, useful for treatment and diagnosis of atherosclerosis and for identifying subjects at risk.

Claim 4; Fig 11; 47pp; English

CC This cDNA clone codes for novel rabbit low density lipoprotein (LDL)
CC binding protein LBP-2 (see AAW49038). It was isolated by functional
CC screening of a cDNA library, produced from balloon-deendothelialised
CC healing rabbit abdominal aorta mRNA, for clones encoding LBPs able to
CC bind both native and methyl LDL. cDNA clones (see AAV32834-39) and
CC encoded rabbit and human LBPs (see AAW49037-42) are claimed. An
CC abnormality in an aspect of LBP metabolism or structure is diagnostic of
CC a risk for atherosclerosis. The invention provides: methods for
CC determining if an animal is at risk for atherosclerosis (e.g. for
CC grenatal screening); methods for treating atherosclerosis (including gene
CC therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent
CC formation of atherosclerotic plaque; and methods for treating a cell
CC having an abnormality in LBP structure or metabolism. Pharmaceutical and
CC vaccine compositions are also provided, as well as recombinant vectors
CC and host cells used to produce recombinant LBP and gene Ģ,

The present sequence is that of genomic DNA encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB82806). The DNA was isolated from a human genomic library by screening with LBP-2 cDNA (see AAH26494). The open reading frame spans 5 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and
                                                                                                                                                                             New isolated low density lipoprotein binding polypeptide for treating diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                               02-MAR-2000; 2000US-00517849.

PM S 밁 Ş 멍 뭕 thing polynicipulies between the sequences of the polynicipulies of the polynicipulies of the polynicipulies of the polynicipulies sequences and proteins also homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed and the stample of activities include: neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; and antibacterial. The polynucleotides can be used for the detection of various disorders such as cancer, chromosome concertification, as chromosome markers, and for numerous other diagnostic or research purposes. The secreted proteins can be used to treat consorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, reproductive, concertive disorders, wound healing, and infectious diseases. The proteins can also be used as a food additive or preservative to increase or decrease concertives. AAC59557 to AAC59565 and AAB3429s represent concertions used in the exemplification of the present invention Human; secreted protein; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; and antibacterial; gene therapy; detection; cancer; chromosome marker; chromosome identification; neural disorder; immune disorder; muscular disorder; reproductive disorder; gastrointestinal disorder; pulmonary disorder; cardiovascular disorder; renal disorder; preservative proliferative disorder; wound healing; infectious disease; preservative detecting, preventing, neurological disorders 23-MAR-1999; 10-DEC-1999; 26-JAN-2001 Human secreted proteins and detecting, preventing, and t 16-MAR-2000; 2000WO-US006822 28-SEP-2000 WO200056883-A1 Claim 1; Page 344; 429pp; polynucleotide sequences given in AAC59566 to AAC59614 encode 4996 5116 additive; 186 2000-587666/55. sapiens ÇĄ, secreted HUMAN isPheGluAspAspAspProAspGlyPheLeuGly TCCGCCTCGGGCCAGCCCTGAAAATCTACGAGCACCACATCAAGGTGCTTCAGCAAGGCC leArgLeuGlyProAlaLeuLysIleTyrGluHisHisIleLysValLeuGlnGlnGlyH AMATTGATGGCAMATCTTTGCTGCTCATGCAGCGCACAGATGTGCTCACCGGCCTGTCCA Ruben (first GENOME protein 99US-0126054P 99US-0169916P SM, CDNA; entry) SCI INC Komatsoulis gene and and 1134 English. d gene sequences encoding them, useful treating disorders such as cancer, immune system disorders. φ SEQ ВP Ħ NO:19 5150 217 the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mendrick

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             망
                                                                                                                                                                                                                                                        US-09-976-740-7 (1-217) x ADA53650 (1-1566)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isogai T, Sugiyama

The present sequence is that of a colon specific gene (CSG), designated LSGold gene 407124. This is 1 of 22 claimed CSGs (see ABA91302-23) identified in the Incyte LIFESEQ Gold database using the data mining Cancer Leads Automatic Search Package (CLASP), which identifies highly expressed organ and cancer specific genes. The CSG, or its encoded protein, can be used as a diagnostic marker of colon cancer. The invention provides claimed methods of diagnosing colon cancer, diagnosis metastasis of colon cancer, staging colon cancer, monitoring colon cancer for the onset of metastasis, and monitoring a change in stage of colon monitoring, Colon Macina diagnosis; Colon 08-APR-2002 26-MAY-2000; 29-MAY-2001; 2001WO-US017583 06-DEC-2001 WO200192528-A2 Homo ABA91317; ABA91317 (DIAD-) sapiens 484 194 424 174 364 154 307 134 114 specific polypeptides and polynucleotides useful oring, staging and treating colon cancer. 208 1; Page 110-111; 116pp; English specific colon 94 84 Ŗ DIADEXUS LysProSerAspProValGluTrpThrValMetAspValValGluTyrPheThrGluAla standard; LeuMetGlnArgThrAspValLeuThrGlyLeuSerIleArgLeuGlyProAlaLeuLys GGATTTGAGGAGCAAGCTAGTGCTTTTCAGGAAACAGGAAATTGATGGAAAATCCCCTGCTA 91 GGCTCTGTCGGTGTAAAAAATTCCATGGAAAAT----ATCTACGAATATCATGTAAAACCTCTGCAGACAAAGCATTTAAAGAACAAC IleTyrGluHisHisIleLysValLeuGlnGlnGlyHisPheGluAspAsp TTGATGACAAGAAATGATGTGTTGACAGGACTTCAGTTAAAATTGGGGGCCTGCTCTGAAA LysProAlaLeuProGlyAlaAspGlyThrProPheGlyCysProProGlyArgLysGlu GAAGTAAAGGAACCCTGCAGCCTTCCCATGCTATCTGTTGACATGGAAAACAAGGAAAAT -----CCGAGCTCCGCGCGCGCAAACCTCCCGGCGCCCATGCGGGAGTTGCT gene .yPheProGluGlnAlaThrAlaPheGlnGluGlnGluIleAspGlyLysSerLeuLeu yThrAlaSerValAlaThrGlyProAspSerProSerProValProLeuProProGly - CCACCTGATCCTGCAGACTGGGCCGTGATGGATGTCGTCAATTATTTCCGAACCGTG Chen S, specific 2000US-0207383P (first gene; CSG; gene; human; colon cancer;

cancer in a patient, by determining the level of a CSG in a sample of cells, tissues or body fluid and comparing it with the level in a corresponding sample from a healthy human control or from a sample to previously from the patient. Also claimed are methods of identifying therapeutic agents for use in imaging and treating colon cancer. Treatment may involve administering and creating colon dencer appression or activity of a CSG. Adoptive immunotherapy and gene therapeutics may be used. A claimed vaccine for treating colon cancer may be used. es a claimed a sample taken therapy

                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (I) and polypeptide (II) CC sequences. (I) is useful as hybridisation probes, polymerase chain CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a golypeptide in tissue, as molecular weight markers and as a food consisted the sequences of the involving aberrant protein expression or biological activity. The conversation of the sequences have applications in diagnostics, forensics, gene mapping, identification of mutations creations of the produce other types of data and products dependent on DNA and continuously sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in continuously from Wipo at continuously that and incoming format directly from Wipo at continuously the continuously of the sequence of the involving aberrant protein wipo at the printed specification, but was obtained in the printed specification, but was obtained in the printed specification.
                                                                                                                                                                                                                                                                                                                                Sequence 483 BP; 127 A; 112 C; 87 G; 157 T;

/pote="SAM; Region: Sterile alpha motif. Widespread domain in signalling and nuclear proteins. In EPH-related tyrosine kinases, appears to mediate cell-cell initiated signal transduction via the binding of SH2-containing proteins to a conserved tyrosine that is phosphorylated. In many cases mediates homodimerisation"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /codon_start=1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Natl. Acad. Sci. U.S.A.
                                                        /gene="IOC90378"
/note="SAM; Region: Sterile alpha motif. Widespread domain /note="SAM; Region: Sterile alpha motif. Widespread domain in signalling and nuclear proteins. In EPH-related tyrosine kinases, appears to mediate cell-cell initiated signal transduction via the binding of SH2-containing proteins to a conserved tyrosine that is phosphorylated. In many cases mediates homodimerisation"
                                                                                                                                                                                                                                                                                                                                                             /db_xref="locusID:90378"
